### Chapter 12 Dna Rna Reading

1. Before translations occurs, mRNA is transcribed from DNA in the nucleus. 2. It is the job of transfer RNA to bring the proper amino acid into the ribosome to be attached to the growing peptide chain 3. When the ribosome reaches a stop codon, it releases the newly formed polypeptide and the mRNA molecule.

300Chapter 12. The double helix structure explains how DNA can be copied, but it does not explain how a gene works. In molecular terms, are coded DNA instructions that control the production of proteins within the cell.The first step in decoding these genetic messages is to copy part of the nucleotide sequence from DNA into RNA, or ribonucleic acid.These RNA molecules contain coded information for making proteins.
