Diagrams and Notes First published 2015 R. Kwas updates on-going. The PCV system is occasionally the source of some confusion because you will notice that between the B18 and B20 diagrams below, the direction of flow (of gasses) at oil filler cap changes (and the PCV Valve is eliminated on the B20).

As before, the PCV hose is taken out of the equation because nothing is going to flow to the manifold now that the pressure in the intake manifold and the valve cover is about the same. Even if some blow-by gasses do go through the PCV hose, there is lots of it left and the

A PCV system prevents pollutants from escaping into the environment, and vehicle manufacturers started fitting engines with a PCV valve to ensure that the gas remains contained within your vehicle. In naturally aspirated engines, the PCV valve connects the crankcase to the intake manifold.
