Examples of the root locus techniques. The roots of the characteristic equations are at  $s=-1$  and  $s=-2.5 \pm j5.8$  (i.e., the roots of the characteristic equation  $s^3 + 6s^2 + 45s + 40$ ), so we might expect the behavior of the systems to be similar. Since the pole at  $s=-1$  is closer to the origin, we would expect it to dominate somewhat, giving the system behavior similar to a first order system with a ...
