Snowboard flex varies between boards but are not standard across the industry so brands will often give a number rating from 1-10, 1 being softest and 10 being the stiffest, with medium flex around 3-5. So what flex should you go for? Here's a breakdown of soft and stiff flex, with medium flex falling somewhere in between.

Snowboard Buying Guide | Snow+Rock

Camber is the amount of space beneath the center of a snowboard when it lays on a flat surface and its weight rests on the tip and tail. In other words, This is the gentle arch the board makes when you rest it on a flat surface. It's closely related to flex: the higher the camber, the more pressure the board puts at the nose and tail.
