A sample space in conjunction with a probability measure is called a probability space. A probability measure is simply a function P that assigns a numerical probability to each subset of the sample space. A probability measure must satisfy a number of consistency rules that will be discussed later.

The addition rule states the probability of two events is the sum of the probability that either will happen minus the probability that both will happen.

### Probability Rules | Boundless Statistics

The mathematics field of probability has its own rules, definitions, and laws, which you can use to find the probability of outcomes, events, or combinations of outcomes and events. To determine probability, you need to add or subtract, multiply or divide the probabilities of the original outcomes and events. You use some combinations so often that they have their own rules and formulas.

Probability is the likelihood of a random event happening. It is usually expressed as a ratio. Since probability is expressed as a ratio, or fraction, you can think of it as being the odds that something will happen, on a scale of 0 to 1, with 0 being no chance, and 1 being certain (that is, the event will happen 1 out of 1 times).
